Slides From Digital Files

We make 35mm slides directly from digital files. Our Lasergraphics film recorder uses an electron beam to expose razor sharp images at 4K resolution.

File Formats: Slides from Digital Files are available from Jpeg, Tiff, PDF. If you are working with graphics software and need help saving the image files into a format listed above, please call for assistance.

Proportions: The proportion of a 35mm slide is 3:2. If you want your image to completely fill the slide you must crop or design with this proportion. Images that do not conform to this 3:2 aspect ratio will not be cropped, instead the extra space will be automatically filled with a black background.

File Size - 8x12 at 300 ppi is our recommended file size for optimum results, but we have seen much smaller files produce excellent slides. Do not attempt to interpolate (resize) a small file, simply give us the biggest file you have and we will format it correctly.

Upload files - Use our "Digital Drop Box" or email to get files to the lab.

Available From:

- Jpeg, Tiff, and PDF file formats.
- 8x12 at 300 ppi** is our recommended file size
- \$120 Minimum Order**

	\$120 Minimum Order		
	# of copies from each		
# of originals	1st	2+	10+
1+	15.00	10.50	7.75
10+	12.50	8.75	6.50
25+	10.00	7.00	5.25

Turn-around:

- 3 weeks

Slides From Film

35mm slides can be made from virtually any type of film (slide, color negative, B&W negative, 35mm, medium format and 4x5). We start by scanning the original film. The scan is then color corrected and digitally cleaned for dust. Finally we image the file to slide film using our Lasergraphics film recorder.

Available From:

- 35mm, Medium Format or 4x5 film.
- Color or B&W
- Negatives or Slides / Transparencies
- 4x5 Originals:** Add \$20.00 scan fee.
- \$120 Minimum Order**

	\$120 Minimum Order		
	# of copies from each		
# of originals	1st	2+	10+
1+	25.00	10.50	7.75
10+	20.00	8.75	6.50
25+	16.00	7.00	5.25

Turn-around:

- 3 weeks
